OF STATE HEAD INJURY
ADMINISTRATORS**

February 3, 2021

The Honorable Patty Murray, Chairwoman
Appropriations Subcommittee on
Labor, Health and Human Services,
Education, and Related Agencies
United States Senate
Washington, DC 20510

The Honorable Roy Blunt Ranking Member
Appropriations Subcommittee on
Labor, Health and Human Services,
Education and Related Agencies
United States Senate
Washington, DC 20510

Dear Chairwoman Murray and Ranking Member Blunt:

As you consider appropriations for fiscal year 2022 for the Centers for Disease Control and Prevention's (CDC) National Center for Injury Prevention and Control, the undersigned organizations request that you appropriate \$5 million to fund the National Concussion Surveillance System, authorized by the Traumatic Brain Injury (TBI) Program Reauthorization Act of 2018 (Pub. Law 115-377). This provision also keeps with the recommendations of the Committee on Sports-Related Concussions in Youth; the Institute of Medicine (IOM); National Research Council's report, which call for CDC to establish and oversee a national surveillance system to accurately determine the incidence of sports-related concussions, including those in youth ages 5 to 21. This recommendation came about as the Committee concluded that there is currently insufficient data to accurately estimate the incidence of sports-related concussions in youth and in subpopulations of youth.

While the IOM report focused on the need for data relating to sports-related concussions, data is needed to capture all incidences of concussions that may be due to falls, work related injuries, domestic violence, and recreational injuries. In its 2014 report, "Surveillance Report of Traumatic Brain Injury-related Emergency Department Visits, Hospitalizations, and Deaths," the CDC found that falls were the leading cause of injury for TBI-related emergency department visits, hospitalizations, and deaths in 2014, and over half of TBIs attributed to falls were in the youngest (0-4 years) and oldest (≥ 75 years) age groups, suggesting a need to intensify efforts related to fall prevention, particularly in these age groups.

Therefore, we ask that you fund the National Concussion Surveillance Systems to capture the extent of concussions in the United States, to identify populations at risk necessary to determine federal programmatic priorities, support and evaluate prevention activities and efforts, and to assist States in planning for ongoing follow up and treatment as the result concussion-related disabilities.

Sincerely,
