The Honorable Mitch McConnell
317 Russell Senate Office Building
Washington, D.C. 20510

The Honorable Nancy Pelosi
1236 Longworth H.O.B.
Washington, DC 20515

The Honorable Kevin McCarthy
2468 Rayburn House Office Building
Washington, DC 20515

Dear Speaker Pelosi, Leader Schumer, Leader McConnell, and Leader McCarthy:

As you consider appropriations for fiscal year 2022 for the Centers for Disease Control and Prevention’s (CDC) National Center for Injury Prevention and Control, the undersigned organizations request that you appropriate at least the House Labor-HHS-Education Appropriations level of $2 million to fund the National Concussion Surveillance System. While we would ideally like to see the program funded at the $5 million authorized-level by the Traumatic Brain Injury (TBI) Program Reauthorization Act of 2018 (Pub. Law 115-377), we are grateful for the House’s funding of $2 million. We are confident that this funding level will allow CDC to develop an initial system that will be beneficial in collecting necessary data.

This provision supports the recommendations of the Committee on Sports-Related Concussions in Youth; the Institute of Medicine (IOM); National Research Council’s report, which call for CDC to establish and oversee a national surveillance system to accurately determine the incidence of sports-related concussions, including those in youth ages 5 to 21. This recommendation came about as the Committee concluded that there is currently insufficient data to accurately estimate the incidence of sports-related concussions in youth and in subpopulations of youth. While the IOM report focused on the need for data relating to sports-related concussions, data is needed to capture all incidences of concussions that may be due to falls, work related injuries, domestic violence, and recreational injuries.

In its 2014 report, “Surveillance Report of Traumatic Brain Injury Related Emergency Department Visits, Hospitalizations, and Deaths,” the CDC found that falls were the leading cause of injury for TBI-related emergency department visits, hospitalizations, and deaths in 2014, and over half of TBIs attributed to falls were in the youngest (0-4 years) and oldest (≥75 years) age groups, suggesting a need to intensify efforts related to fall prevention, particularly in these age groups.

In order for the CDC Concussion Surveillance System to be able to meet the goals of these reports and the authorized language, we need to see at least $2 million funded for the program. The level of $1 million included in the Senate Democratic version of the Labor-HHS-Education bill is helpful, but we understand it would not be enough to adequately capture the extent of concussions in the United States,
to identify populations at risk necessary to determine federal programmatic priorities, to support and
evaluate prevention activities and efforts, and to assist States in planning for ongoing follow up and
treatment as the result concussion-related disabilities.

As such, we strongly request at least the House-passed version of $2 million for the National
Concussion Surveillance System to ensure that we accurately determine the incidence of concussions,
particularly among the most vulnerable of Americans. Thank you for your consideration of our request.

Sincerely,
