The Honorable Mike Johnson Speaker U.S. House of Representatives H-232, The Capitol Washington, DC 20515

The Honorable Hakeem Jeffries House Democratic Leader U.S. House of Representatives H-204, The Capitol Washington, DC 20515 The Honorable John Thune Senate Majority Leader U.S. Senate S-230, The Capitol Washington, DC 20510

The Honorable Charles Schumer Senate Minority Leader U.S. Senate 322 Hart Seante Office Building Washington, DC 20510

Dear Speaker Johnson, Majority Leader Thune, Minority Leader Schumer, and Leader Jeffries:

The undersigned physician organizations representing national medical specialty societies and state medical associations write in strong support of (H.R. 3514/S. 1816), the "Improving Seniors' Timely Access to Care Act of 2025." This bipartisan legislation would streamline and standardize prior authorization requirements within the Medicare Advantage (MA) program, addressing one of the most persistent barriers to timely, medically necessary care for America's seniors.

Prior authorization continues to be a leading source of care delays and frustration for patients and physicians alike. It is a practice used by health plans to require pre-approval for coverage of items, services, and pharmaceuticals, often resulting in treatment delays, denials of medically necessary care, poorer patient health outcomes, and significant administrative burden. In a 2024 American Medical Association national survey, 93 percent of physicians cited care delays linked to prior authorization, 82 percent reported that it sometimes causes patients to abandon recommended treatment, and almost one in three physicians witnessed prior authorization leading to a serious adverse event for a patient, including hospitalization, disability, or death. The consequences are particularly acute for patients with complex or life-threatening conditions, such as cancer. A recent survey of oncology professionals found that nearly all participants reported patients experiencing harm due to prior authorization delays, including disease progression (80 percent) and even loss of life (36 percent). These findings highlight the urgent need for congressional action to protect patients from bureaucratic barriers to care.

Data from the federal government further confirms the negative impact of prior authorization processes within MA. More specifically, an April 2022 Department of Health and Human Services Office of Inspector General Report concluded that 13 percent of prior authorization requests that were ultimately denied for MA patients would have been approved for these same beneficiaries had they been covered under traditional Medicare. The same study also found that 18 percent of payment requests that were denied by MA plans actually met standard Medicare coverage and billing rules.<sup>3</sup>

The Improving Seniors' Timely Access to Care Act of 2025 provides numerous solutions to the multifaceted problem of prior authorization. It would require MA plans to implement an electronic prior

authorization system that meets federal interoperability standards, building on the Centers for Medicare & Medicaid Services' (CMS) 2024 Interoperability and Prior Authorization Final Rule.<sup>4</sup> By replacing outdated faxes, proprietary portals, and inconsistent processes, the bill would simplify and accelerate prior authorization decisions by requiring a standard electronic process that integrates with physicians' electronic health records. It also promotes transparency by requiring public reporting of approval and denial data and disclosure of any use of artificial intelligence or algorithmic tools in coverage determinations. Further, it outlines a process for defining routinely approved care and gives CMS explicit authority to implement tighter deadlines for approving items and services, such as 24 hours for urgent care. Finally, it directs plans to base requirements on evidence-based criteria and to review those requirements annually to eliminate unnecessary barriers to care. By codifying these patient protections and remaining consistent with the CMS' 2024 Interoperability and Prior Authorization Final Rule,<sup>5</sup> the bill would reduce administrative waste, improve patient outcomes, and make certain that medical decisions are timely, transparent, and clinically sound.

The Improving Seniors' Timely Access to Care Act has been the principal prior authorization legislative priority for national medical specialty societies and state medical associations for many years. In fact, previous versions of this legislation passed the House of Representatives and key committees of jurisdiction in the 117th and 118th Congresses, respectively. Introduced in the 119th Congress by Representatives Mike Kelly (R-PA), Suzan DelBene (D-WA), Ami Bera, MD (D-CA), and John Joyce, MD (R-PA), as well as Senators Roger Marshall, MD (R-KS) and Mark Warner (D-VA), this bipartisan legislation has already been cosponsored by a majority of the House of Representatives and a super majority of the Senate. Furthermore, the latest version of the Improving Seniors' Timely Access to Care Act has been modified in a way that preserves its ability to enact meaningful changes to prior authorization processes while simultaneously ensuring limited to no fiscal impact as assessed by the Congressional Budget Office.

The time for expeditious legislative action is now. We urge the House and Senate to bring the H.R. 3514/S. 1816, the Improving Seniors' Timely Access to Care Act of 2025, to the floor and pass it without delay.

Sincerely,

American Medical Association
