Congress must act now for jobs & medical innovation.

Medical technology and diagnostics companies support more than two million jobs across the United States and, as a net exporter, provide strong opportunities for manufacturing growth. Its innovations help patients everywhere live longer, better lives while helping to reduce healthcare costs.

Unfortunately, the \$30 billion medical device tax will harm job creation, reduce investment in medical innovation, and increase the cost of health care.

The medical device tax has already cost medical technology companies more than \$1 billion this year alone. There is broad bipartisan agreement to repeal the device tax. We urge Congress to work together to end this tax before it does further damage to American innovation and job creation.
